

Minilesson 3

Second Grade

Math

OSMO Tangram & Splash Math

The students will individually do Splash Math Geometry on their iPads. Splash Math Geometry has a shape and 4 multiple choice questions, and the students must pick the right answer. Each time you answer a group of questions right you add an animal to your aquarium. After the students are finished with their Splash Math they can work in partners with the OSMO Tangram. OSMO Tangram will show a shape on the iPad and the students will have to build the shape using a bunch of little shapes. For example, The iPad will show a flamingo and the students will have to use squares, triangles, and rectangles to make it.
