

How to make a jumping origami frog:

Step 1: Get a piece of paper

Step 2: Fold the paper in half (hot dog style) to make a rectangle. You can leave it folded or cut off the excess.

Step 3: Fold the upper corners down individually starting with one corner and moving on to the other. You will unfold each corner of the paper and an "X" should be creased into the top of the paper.

Step 4: The right and left side of the x will need to be pushed in, so take your middle fingers on each side and push the sides in. This will fold the paper in and the top of the paper should now have a triangle peak.

Step 5: Take the bottom part of the paper and fold it in half so that the bottom of the paper is now touching the bottom of the triangle.

Step 6: Fold the sides of the rectangle portion underneath the top of the triangle. The origami should now resemble an arrow or rocket.

Step 6: Fold the bottom of the paper in half again so that the bottom of the paper is touching the bottom of the triangle.

Step 7: Fold the top corners of the rectangle down to meet in the middle, and pull out the middle of the triangle. This should leave you with a triangle on top and a rhombus on the bottom.

Step 8: Fold the top edges of the trapezoid down to make folded triangles. These will be the "feet" of the frog.

Step 9: Fold the bottom corners of the top triangle up to make two smaller triangles.

These will be the frog's "hands"

Step 10: Looking at the NOT smooth side of the frog, fold the body of the paper in half.

You should now be looking at the rectangle portion of the frogs body.

Step 11: From there, take the top of the rectangle and fold it down so that the top of the the rectangle is now touching the bottom of the rectangle.

(Optional) Step 12: Decorate your frog!

This picture is just to help get an idea of the way the origami should look throughout
