

Hannah Bridger

Grade Level: 1st Grade

Curriculum Topic: Robot Tips

Tools: Brain Pop + Cue & Dash

- For a fun lesson and an introduction to the new toys, Cue & Dash, this Brain Pop will introduce and show what robots are capable of doing. I think that this lesson will be a downtime lesson on a super busy day.
- Cue & Dash will be something that the students will really enjoy. Before introducing these robots, I would have each table group come up with 2 questions for the robots. This will let the students have a chance to see what the robot is capable of doing and for the students to have a small break from the books.
