Title: Comic Mania

Version: 1.0.2 (one of a series)

Publisher: Exevio Ltd.

Target Audience: The target audience of this app is for users above the age of 4. This app would be beneficial to use between the grades of 2nd-5th grade.

Curriculum: This app fits into the curriculum of a regular education classroom because it focuses specifically on the creating personal comic strips using technology.

Environment: The possible environment for this app would be in the regular classroom and teachers could use this app as a type of assessment for students. After teaching students, a new concept in regards to a particular school subject, students could find a partner and together they would create a comic strip showing the teacher what new information they learned.

Cost: This app is completely free! There is no cost to this app because the publisher wanted to make this app accessible for all users. There are also no in-app purchases since it is a completely free app that can be found on the App Store.

Description of Software: This software is set up for the user to create their own personal comic strip. This app can be used within a classroom based on the content being learned. This app allows users to choose a character they want to be used in their comic strip which all appear to be different colors, making the app more appealing for young users.

Impression of Software: My impression of the software is an excellent one because it is easy to use and there is not an excessive amount of different characters that users have to decide to pick from. As a future educator, I feel as if this could be effective in a classroom that involves older students such as grades 2nd-5th. After teaching a new concept to my students, I could use this app as a type of assessment. Students could pair up with another classmate, or work individually, and create a comic strip over the content they have just learned about. As the teacher, I would then be able to visually see what the students are learning and comprehending. By allowing students to use this app as a review assessment, students would be able to create their comic strips in a timely manner and all comic strips would be different since all individuals are unique in their own ways.

Pass: This software passes the evaluation due to the well-made aspects of the app as well as the fact that it is user-friendly. This app is simple and was created to be a basic app to create comic strips for young users.
