

Padlet

Padlet is an on-line tool that can be used to organize things and share it with others. It is a digital post-it board. I could use it to post different assignments for my lessons. I will make a wall for each lesson and add the assignments and anything related to the lesson that I want the students to see. This way student will have easy access to all lesson materials to be used when needed. I can make another wall and ask students to post their projects or thoughts. I will allow students to interact and leave comments for one another using Padlet. I can make a question bank wall and ask students to post any questions they have about the lessons. I will answer the questions and the whole class can use it while they are studying.
