

Mini-Lesson Idea #2: Excel & Google Quiz

1. Grade level: 1st Grade
2. Curriculum: AR.Math.Content.1.MD.C.6
 - Organize, represent, and interpret data with up to three categories, using tally tables, picture graphs and bar graphs
 - Ask and answer questions about the total number represented, how many in each category, and how many more or less are in one category than in another
3. Tools: The students will use Kahoot & Excel for this lesson.
4. Synopsis: For this lesson the students will be shown data and asked question about it. I will use excel to make the adjustments need and to convert data to various types. We will customize things together as a class and make up different scenarios. I will then have the class access the quiz and we will go over each question one by one but will not stay the answers aloud.
