Title: Kids Planet Discovery

Version: 3.9.1

Publisher: Planet Factory Interactive S.L.

Target Audience: The publisher states that this app is for ages 4+ and made for ages 6-8 and we both agree with this.

Cost: This app is free but there is only one section you can access. All of the other sections in the app are \$1.99 per section.

Type of Software: Discovery Learning: This app is discovery learning because it lets students learn about the world in a game formation. This app lets them visit different parts of the world and then gives them games to play to see which place goes to this, what country is it, name of the place, etc.

Curriculums: This app does fit into the curriculum because it is teaching students about the history of places around the world and geography all while in game form which makes it more fun and interesting for the students, but since there is only one section open, the students can't get the full information and won't be able to see and learn everything in the app.

Describing the Software: The Kids Planet Discovery app allows students to visit places all over the world in game form. While they are looking at places all over the world, the app allows the students to play games to see if they can name the places, what country the places are in and etc. It teaches students about different foods that are all over the world and gives them games that allows them to match the foods to the right place.

Impressions of the Software: We both didn't really care for this app. It only allows students to use one section, and then it wants you to pay \$1.99 for all the other sections. This sets this app back because if all the sections aren't available, then the students can't learn all the information they need. We both think that there are better discovery learning apps that will better enhance a child's learning development than this one.

Pass: Not for us
