Title: Popplet Lite

Version: 2.5.1

Publisher: Notion, Inc.

Target Audience: The publisher states that this app is for ages 4+ but we both agree that this app should be for older ages like 6+

Cost: This app was free, but there is a full version that costs \$4.99

Type of Software: Tools: This is a tools app because it allows students to make different diagrams and graphs and webs. They have different tools they can use like changing the color, text size, text font, etc.

Curriculums: This app does fit into the curriculum because it allows the users to make webs which they could use for stories or they could use for brainstorming an idea.

Describing the Software: The Popplet Lite app is an app that allows users to organize, jot down ideas, and then sort them out correctly. When you start the app is starts with one circle and it allows you to link others to it and it creates a web. You can change the font size and the font style on this app, and you can create borders to go around your webs. This is a great app to use for brainstorming and idea or trying to put stories together.

Impressions of the Software: We both thought the app was very neat and we liked how it allows you to add as many webs as you would like and that you had the opportunity to change the style and size of your text. We both think that this app is a little too advanced for elementary students to use, because they aren't quite

advanced at writing big paragraphs or full sentences yet. We think we could implement this app into our future classroom by doing lessons likes shapes and creating webs to add information about the shapes like number of sides, and what objects are the same shape.

Pass: Yes
