Title: Splash Math

Version: 5.7.7

Publisher: StudyPad, Inc

Target Audience: The publisher states that this app is for ages 4+ and ages 6-9 because it has different grade levels that you can choose on this app.

Type of Software: Drill and Practice: This app is a drill and practice app because it allows students to work on math problem by solving questions in a fun way and they are able to see how a problem is worked and then they can do problems like it to better understand the content.

Curriculums: This app does fit into the curriculum because it helps students learn mathematical skills through a math game. This app allows the students to work math problems and see how they are solved. It's multiple math problems, but it's in the form of a game which makes it more fun for students.

Describing the Software: The Splash Math app is a software that allows different grade levels to learn mathematical skills in a game formation. You can choose what grade you're in but it only goes up to 5th grade. There are different math areas a student can choose from like: adding, subtracting, multiplying, division, sequences, etc. It teaches math concepts in a fun way for students. The app will show a student how to solve a problem and then give them problems like it so that they can try and do it on their own.

Impressions of the Software: My partner and I both liked this app. We both believe that we could implement this into our future classroom. We think this

software can really help students learn mathematical concepts and they can also advance since there are multiple grade levels with multiple areas that the students can focus on. This app was very easy to navigate and work with, and we both loved how it showed you how to do a problem first, and then gave you problems similar so that you could learn the content.

Pass: Yes!
