Describing the Software: The Where's My Water 2 app is an app that challenges students and helps with their problem-solving skills. This app has many different puzzles that the students have to get through in order to get to a different level. The users must figure out how to dig through the dirt and guide the water to the different objects the game places in the different levels. When you figure out how to get the water to the different objects you pass the level and go on to the next one. This app really makes the users think and try to use their problem-solving skills to get through the dirt.

Impressions of the Software: We both liked this app because of the content, but we both think we could find a better app to use in our future classroom because

while we were using this app, there were so many adds that popped up which made it very difficult and frustrating because it would take forever to try to get to the next level. This app is a great way to help with problem-solving and it really stimulates your brain, but this app needs less apps so that the users have more time to play.
