

Mini-Lesson

Grade Level/Audience: Kindergarten

Curriculum Topic: Coding

Tools: Bot/Code & Forms

Student Collaboration: Students will be in groups while playing with the Bot/Code and students will work individually when doing the forms.

Synopsis: This lesson will focus on coding. The students will have been learned about coding throughout the week and have to do codes and solve them. I will put my students in groups of four. The students will play with the bot/code and code their bot around the obstacle course I have created for them. Each group will have a different obstacle course. Once each group has gotten the chance to do this, I will open up forms. On the forms sheet, there will be images of different codes and there will be a variety of answers. The students will have to try to solve the code and select the right answer. Once they have finished that they will turn it in.
