

Volcano Mini Lesson

Grade Level: 3rd

Curriculum Topic: Science

Tools: Flipgrid Website and Laptop

The students will create their very own Volcano from the material that they choose. They will use the Flipgrid website to respond to the lesson and record themselves making the Volcano erupt. This part of the activity can be done at home with their computers. They will have a few questions to answer in the video response they address the parts of a Volcano to ensure they know what the lesson is about. The students will submit their responses to me and then we will watch the videos on the smart board as a class the next day.
