

- Title: Science Lab for Kids
- Version: Original
- Publisher: Alexey Liger
- Target Audience: 4+--we don't know if this is accurate because the app crashed immediately and would not load at all
- Type: Tutorial. This software holds lots of tutorials for science experiments: how-to's, ingredient lists, and instructional videos.
- Curriculum: Science
- Possible environments and why: We don't know—the app wouldn't load. But perhaps in a science environment, for students to research on their own or do experiment simulations
- Cost: Free, no in-app purchases or extras
- Summary: The software appears to be a pleasing-to-the-eye, simple app with a library of science experiment instructional videos. However, once you download the app, it pulls up the bright green title page with the title of the software and a lab beaker image, and will not load beyond that.
- Impressions: This app is a flop. It would not load. We were excited to see how it would work, but it didn't work at all and we didn't even get to play with it or see any of it beyond what was on iTunes.
- Pass/Fail: Fail! We're disappointed.
