

- Title: Swift Playground
- Version: 2.2
- Publisher: Apple
- Target Audience: 4+, but we think students should be at least 10+ to use it because it is slightly more complicated software.
- Type: Coding
- Curriculum: Just like the other coding apps, we feel that this is probably best for a computer-related class, or any project that can have a STEM spin on it. It could even be used in a reading program.
- Possible environments and why: The opportunities here are endless as well. It could be used for creating a project for a reading class, making coding projects, and just about anything else you can think of.
- Cost: Free to download.
- Summary: This app opens up to cute, alien-like characters and a 3D-esque world. It comes with lessons and challenges to guide you through coding, and it ultimately helps you progress through all of them.
- Impressions: We really liked this app! It is pleasing to the eye, the graphics and characters are fun, and the content is challenging but fun to learn and designed well.
- Pass/Fail: Pass! We like this software a lot and feel that it is very effective.
