

# Communication Through Technology

Inside the Classroom	<u>Away</u> from the Classroom
Email	Social Media
PowerPoint Presentations	Text Messaging
Scholarly Articles	Phone Calls
Google Classroom	Non Approved Websites

## How we use Technology to Communicate in the Classroom

- ❖ I will send out email updates with every update I give on google classroom. My email will also always be open for questions. 
- ❖ In class, PowerPoint presentations will be used by both students and the teacher to display information and new material.
- ❖ Students will have access to hundreds of scholarly articles so that they may relay their new findings to the class.
- ❖ I will utilize google classroom as a home base for the class. The class will run through Google Classroom.
- ❖ Remind texts

## How can Parents Get Involved?

Parents are invited to email me at any time with questions. I should be able to respond quickly. Parents are also welcomed to view power points as well as explore google classroom with their children.

## Benefits of Online Communication

Online communication can make it very easy to access other people; as well as their ideas and research, among other things. It is a great way for students to begin to dive into the massive amount of information made available to them by the internet. It is also a great way for students to begin to dive into the online world at a young age. Computers will more than likely be a big part of their future so getting a head start now is beneficial for both students and educators.

## Student of The Month

This week's student of the month is Jane Doe. Jane showed outstanding work with our rainfall project as well as our population project in math class. She is a great student

and an even better friend to all. Great job Jane!
