Target Audience	Students age ranging from 1 st to college age.
Types of Software	Problem Solving
How software fits into curriculum and classroom environment	This app is a great study tool student can use at home or in the classroom. It has 16 languages the students can choose from to work in, so this could possibly be a great app for ESL students. With elementary aged students this app would be most beneficial for teachers to use in subject, math and science. There is more core-based curriculum on this app for those subjects.
Cost	This app is free

Software description	The slogan for Khan Academy is "You can learn anything. For free" Khan Academy is a learning library full of lessons that challenge the learner and help them brush up on important curriculum concepts. There are learning videos, worksheets, problem solving activities, and many other options for the user to experiment with. The content for math and science is plentiful. For elementary students it is best if the teacher uses this app for strictly those subjects. There is other content for other subjects but not as in depth as math and science. Within the math and science part of the app there are practice quizzes, exercises, and test, all with instant feedback to maximize learning.
Possible Implementations	Teachers can use this app as an assessment tool or use this to assign homework. Students can use it as a study tool to help prepare for a test.
Does the software pass APPS?	My partner and I love this app for 4th grade math and science. It passes APPS.
