How software fits into curriculum and classroom environment	This software could be used in the classroom to be a bell work problem or an exit pass problem. The app gives each user a daily math problem to keep users sharp with their math skills.
Cost	This app is free with NO in-app purchases

App Evaluations

Software description	The software problem solving is a software that is created to give users a problem to solve, but not give the answer right away.
Possible Implementations	In our classroom, we decided that we would use this app as bell work or an exit pass. The students would be able to take out their devices and solve the problem.
Does the software pass APPS?	After reviewing this app, we choose to pass it as a good app, although it does not let you pick what area of math you want your question to come from, it still gives math problems to get the brain flowing.
