Online tools:
Learning more about online tools has to be one of the most beneficial projects we have done thus far. I loved learning about specific technology that can enhance my class. Websites such as ClassDojo allow for parent/teacher communication, as well as class behavior records. I have spent a little over a year subbing in the nettle ton school district and I can say that classDojo is a great in class tool. Even on days when I am subbing, if the teacher gives me access to classdojo, the students are so respectful. These online tools can enhance lessons and make the classroom more fun. The website KAHOOT for example allows students to learn in a way they might not even realize they are learning. Overall, there was nothing that I did not like about online tools.

Padlet:
Padlet can be used all though-out the classroom. The teacher can use padlet to give an overall subject area with content that can be used in and out of the classroom. (this is what I chose to do for my project). Padlet can also be used for the teacher to create a board for students to summit an assignment. When students get access to the board then they can all upload the specific assignment, making it easy for the teacher to access and grade. Padlet can also be used as a classroom communication tool. The teacher can design a padlet that is like a bulletin board and post content when needed.
