

# SUN, MOON, AND PLANETS

By: Kaitlin Akridge

# Sun

- This is a model that shows the different layers of the sun.
- The sun has many layers. In order from middle out: core, radiative zone, convective zone, photosphere, chromosphere, and corona.

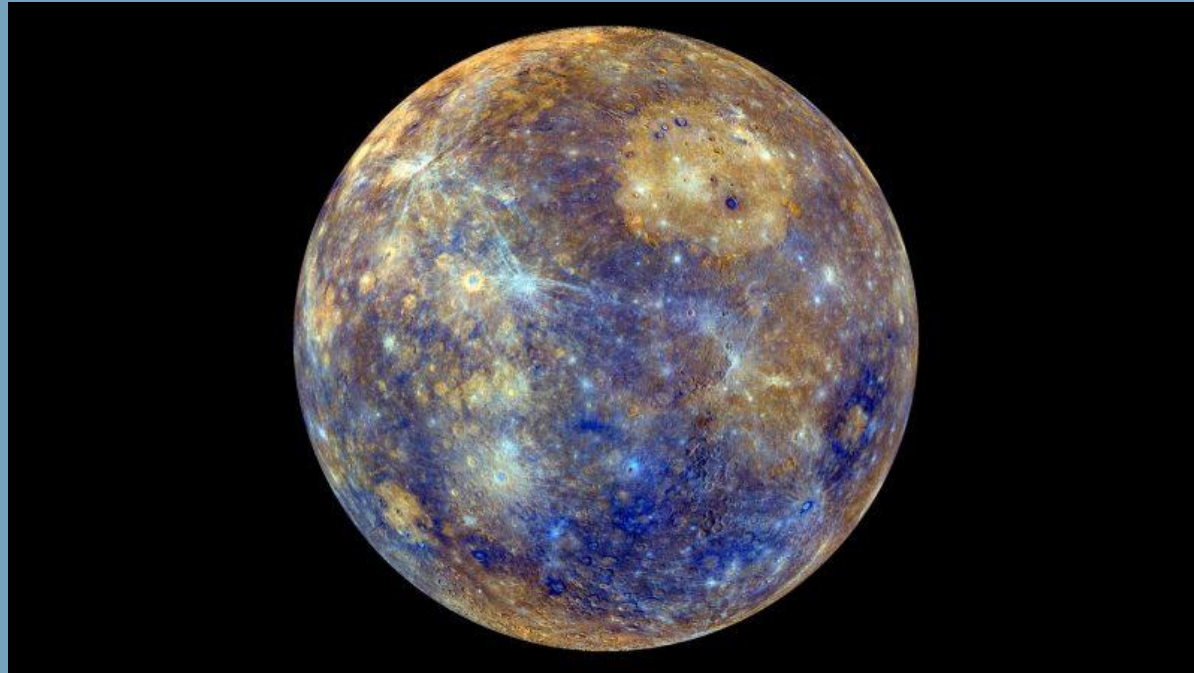

# Moon

- This is the moon it orbits around the earth. It is the earth's natural satellite.
- Its surface is mountains, huge craters, and flat planes called seas that is made up of hardened lava.

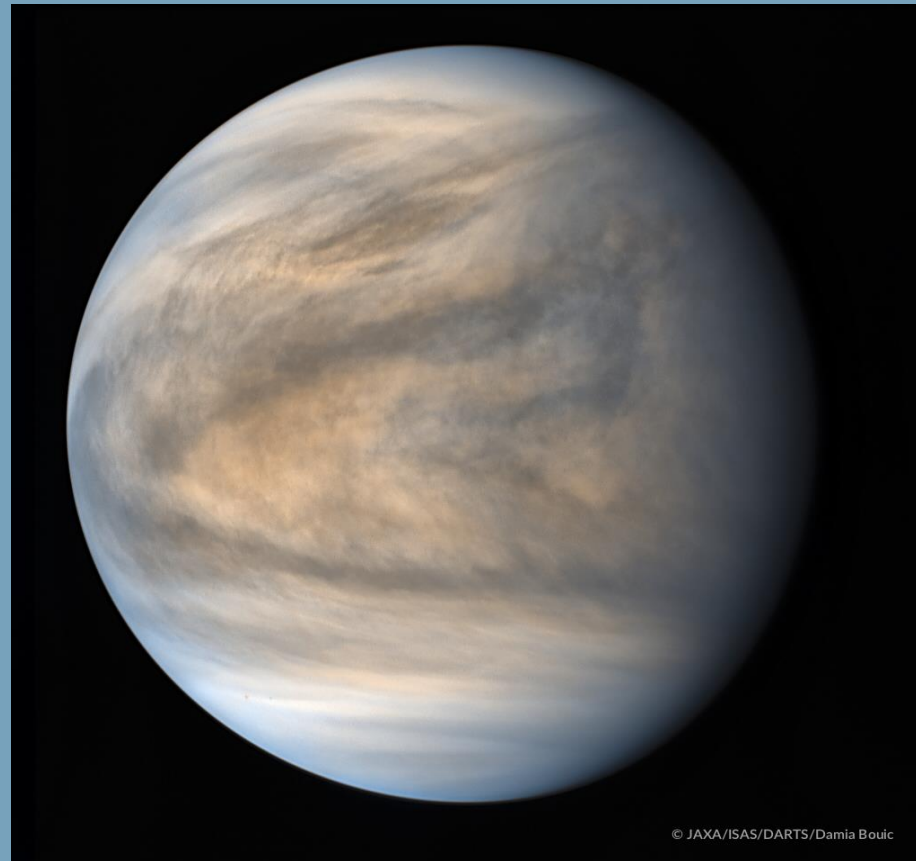

# Mercury

- This is Mercury it is the first planet out from the sun

# Venus

- This is Venus it is the second planet out from the sun.

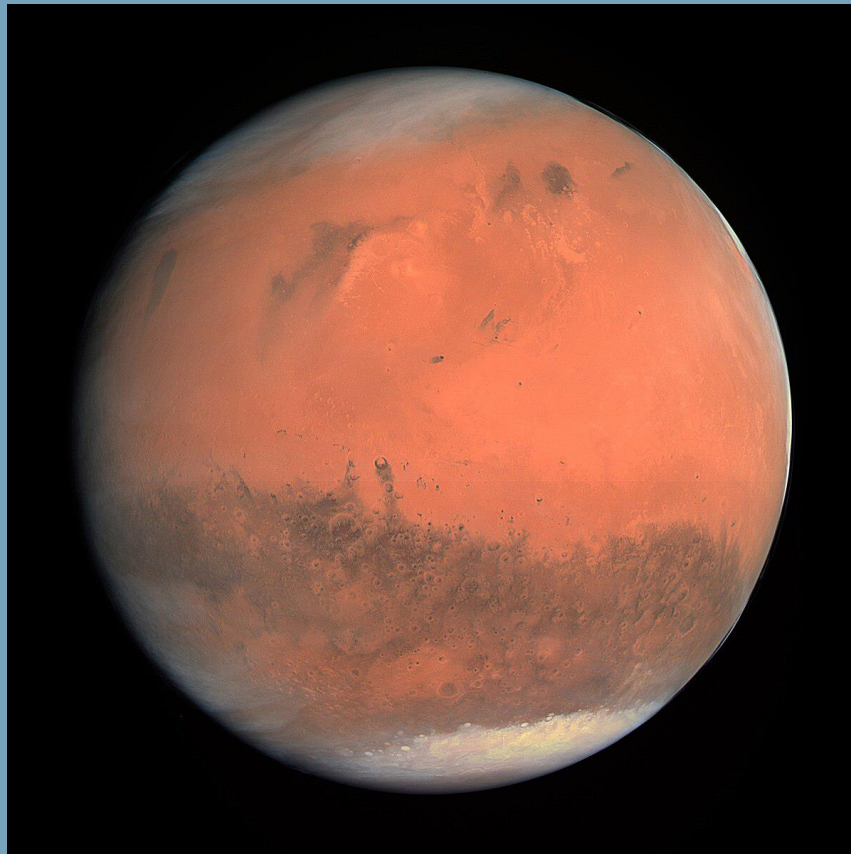

# Earth

- This is earth it is the third planet out from the sun. We live on earth.

# Mars

- This is Mars it is the fourth planet out from the sun.

# Jupiter

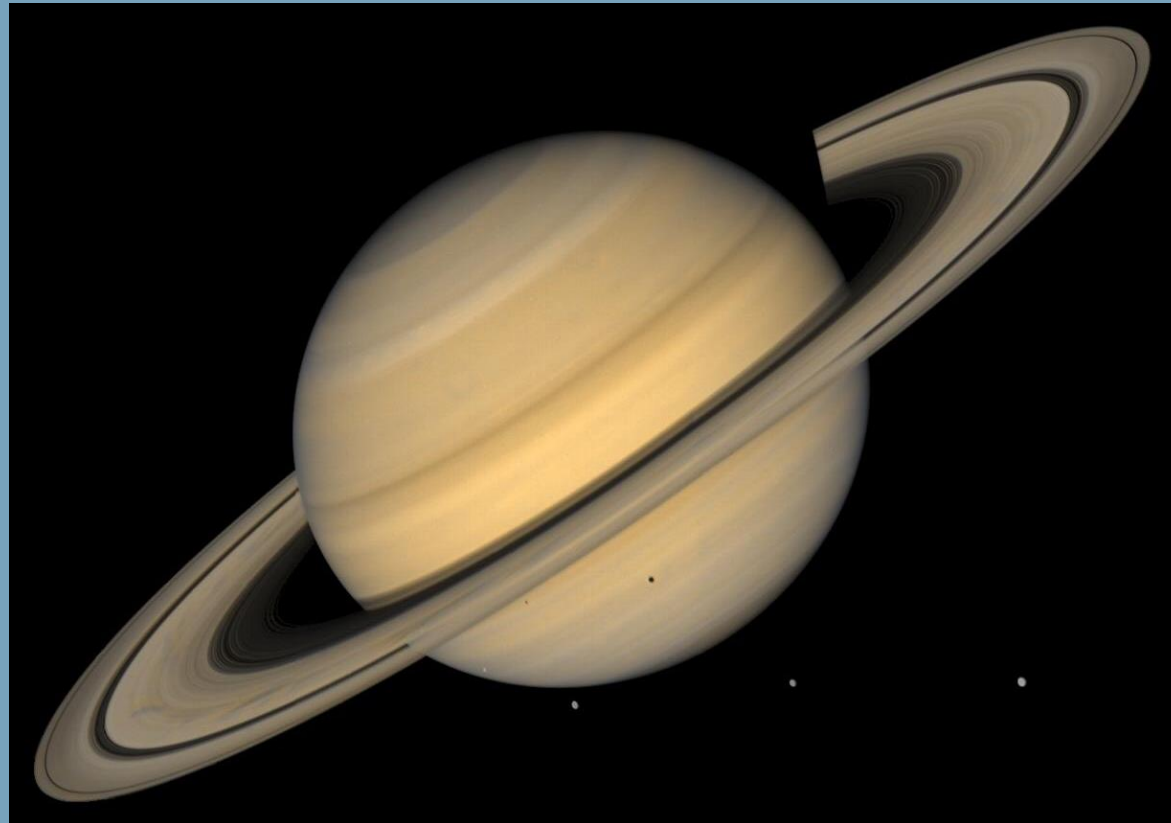

- This is Jupiter it is the fifth planet out from the sun.

# Saturn

- This is Saturn it is the sixth planet out from the sun.

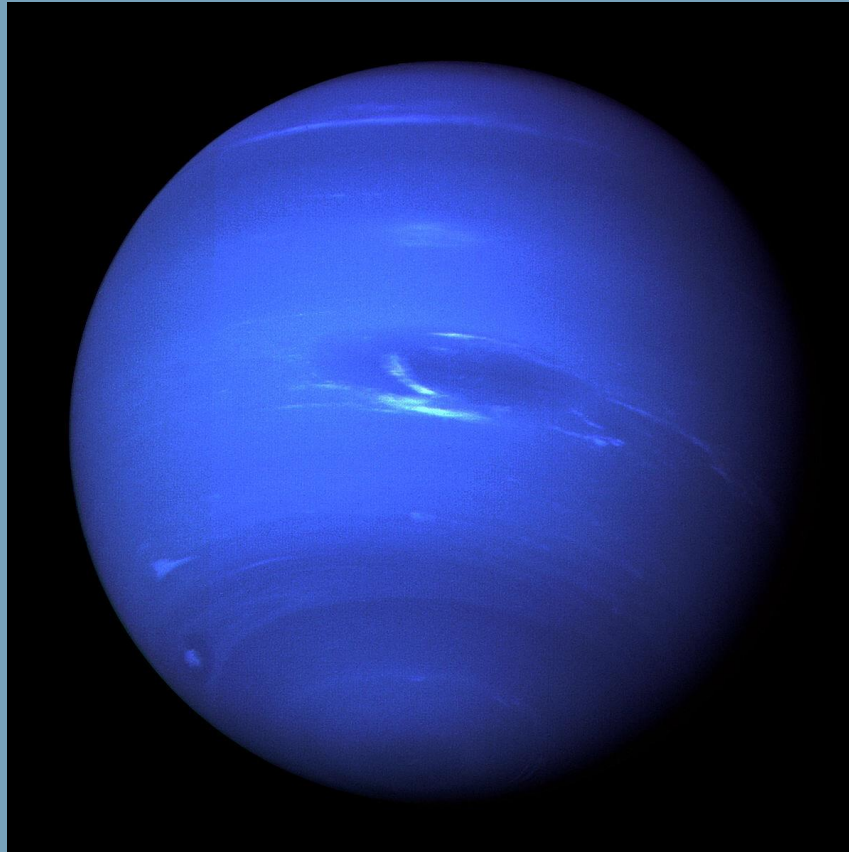

# Uranus

- This is Uranus it is the seventh planet out from the sun.

# Neptune

- This is Neptune it is the eighth planet out from the sun.

# Planets in Order From Sun
