Title: Earth School
Version: 2.0.1
Publisher: Fangwei Deng
Target: The targeted age group for this app is 0 and up. This game is a little more simple but still fun for the kids and very informative.
Curriculum: This app does fit into the curriculum because outer space is included in the area of things we need to teach.
Environment: This app could be used inside or outside of the classroom. It would be used best during a lesson about outer space because that is what the app focuses on.
Cost: This app has in app purchases it is $2.99 for the full version.
Description of Software: This software allows students to interact with outer space and understand outer space better. The student can drag planets over to the black hole and drop them in and see what happens when things are close to a black hole. They can match each planet with its outlined shape, this helps them recognize these and helps them with shapes.
Impression of Software: My impression of the app is good because it looks super cute from the very beginning and looks very enjoyable. I started playing the game and it is really enjoyable and fun for a lot of ages. It's defiantly very easy to navigate and really can be used by a lot younger kids yet is still good for a little older too.
Pass: This software passes the education software evaluation form because it allows easy access to all aspects of the app and includes great information about space, while easy to navigate.
