Title: Ready, Jet, Go

Version: 1.3

Publisher: PBS Kids

Target: The targeted age group for this app is 4 years old and up. This app is very informational so children at age 4 might have a few complications with understanding the material. This type of software is a stimulation because outer space is real-life.

Curriculum: This app does fit into the curriculum because outer space is thought during the grades we want to teach. It is a visual representation of outer space and allows interaction.

Environment: This app could be used inside or outside of the classroom. It would be used best during a lesson about outer space because that is what the app focuses on.

Cost: This app is completely free. There are no in app purchases. This is a great because it allows anyone to use and access all of the material.

Description of Software: This software allows students to interact with outer space and understand outer space better. The user can click on constellations in space, planets, and any information about space. The bot in the app is very interactive and points to what you can click on as well as speaks it if the volume is up.

Impression of Software: My impression of the app is good because of the initial look when you first open the app. When you first open the app it is very interactive and is very inviting. The animations are very real and are high definition. This app allows students to test their understanding of outer space. I would use this app during a lesson on outer space and make students due a project over something they have learned on the app. The navigation is very easy which allows younger students to use it.

Pass: This software passes the education software evaluation form because it allows easy access to all aspects of the app and is free.
