

Title: Simple Mind

Version: 1.22.0

Publisher: Software & Consulting B.V.

Target: The targeted age group for this app is 4 years old and up. This app is best used for students in 1st grade through 5th grade. The app is a little hard to navigate so it would probably be used best in older student classrooms.

Curriculum: This app does fit into the curriculum because it is used to create and learn ideas not only from the teacher but from other students. It will be used to teach the standards during a lesson for class.

Environment: This app could be used inside or outside of the classroom. It would be used best during an in-class lesson because it can be a little hard to navigate.

Cost: This app has a lite version and an upgraded version that is \$6.99.

Description of Software: This software allows students to create illustrated webs to inform other students on their newly found information. This app allows students to input information into a chosen diagram/web.

Impression of Software: My impression of the app is mediocre. The app could be helpful for displaying information but it does not really allow a lot of actions for the lite version. The upgraded version allows a lot more.

Pass: This software passes the education software evaluation form because it allows easy access to all aspects of the app and is free.
