

Grade: First Grade

Topic: Science

Technologies: Ready, Jet, Go (app) & iPads

Synopsis: The students will play on the ready, jet, go app after we read a book about the sun, moon, and planets. This app will help them to see more of what is in space and understand it a little better. It is a great interactive app that they will love. After they get familiar with this app I will have each student stand up and share one thing that they found on the app that was their favorite. I will have them share to allow the other students to maybe find something they had noticed before or to just let them practice speaking out loud.
