

Katie Anderson

5/8/2020

- 6<sup>th</sup> Grade
- Math – Mean, Median, Mode, and Range
- QR Reader and Google Docs

Synopsis: For whole group instruction, I will explain what mean, median, mode, and range are, and how to calculate each one. After the lesson, I will pair up students. Each pair will have to find twelve problems hidden in QR codes around the classroom. There will be two of each type: mean, median, mode, and range. Students will use the QR reader app on the classroom iPads to scan each code. As they scan each code, they will type or write out each problem and solve it in a Google Doc. Each pair of students should share their Google Doc with me after they have found the solution to each problem.
