# *Kodabl*

---

- Version: 1.0.2
- Publisher: Valeriy Danyuk
- Target Audience: This app is recommended ages 6-8 years old.
- Curriculum: This app is a great way to learn coding.
- Cost: The app was free to download and to have access to everything was \$2.99 per month.
- Describing the Software: This app is specifically a coding app for children, but I felt like it was tough to navigate. The student creates the sequence of commands and then it works however it's coded.
- Impressions of the Software: Maybe because we aren't that experienced with coding things, but this app was too difficult to use. I couldn't imagine being a young child and having to navigate this app. There were no tutorials to begin with. This is definitely geared towards students who have some experience.
- Pass: This software does not pass because although it was educational, it wouldn't be fit for a third grade classroom.
