

Padlet:

Padlet is a great online tool for multiple uses. You can customize almost everything in your project. I could create one for each subject and provide helpful tools, tips, and practice that each student can access. As a class, we could brainstorm different items that belong to the specific topic. For example, we could talk about the seasons. I would have everyone in the Padlet and they could add their favorite things about that season! I love social studies so make it fun to add some major historical events and then continue to add current events. One of the best interactive ways to use Padlet would be to list books that are around their reading level. This would be very helpful for them in case they get stuck on what to read next. There is a rate function in Padlet, so as students read them, they could rate how they liked it to help others.

Online Tools:

I have discovered that online tools are the best way to enhance any lesson in any subject. There are so many different online tools that can help with every aspect of life. As a teacher, utilizing online tools is important to help keep communication between the teacher and parents. Online tools provide an easy way to study at home and keep track of progress. Online tools can help enhance lessons because it makes it more fun for the students. They learn so much more when they are having fun doing so. It is way more interesting to learn from any type of online tool, than to just hear the teacher telling you what you need to hear. I love almost everything about online tools. The main things I dislike are that some of the best ones do cost money, so that makes it inconvenient when you already have so many things to pay for. Also, the possibility of the internet or programs crashing. If all of your lessons have to do with an online tool, the it all crashes, that will be a little tough to work around.
