Grade level: 1st

Curriculum topic: Computing

Tools: Phone/iPad, Printer

Synopsis: The students the camera on their phone (if they have one) or the camera on an iPad to take a picture of something. They will zoom into the object until it's fuzzy/blurry. Once the picture is taken, they will have me print off their image. Once it is printed, each student will have a turn at guessing what the picture is of. Each student will have the chance to take their own picture and show the class. I can print off multiple copies to have passed around or project it up to where everyone can see it at once. Every time someone shows their picture, everyone will write down on a piece of paper what they think it might be. This will not be taken for a grade, so it is okay if they get it wrong—it's only a guessing game!
