

Grade level: 1st

Curriculum topic: Computing, Math

Tools: Chromebook, Google Slides

Synopsis: Every day after our math lesson, the students will take out their Chromebooks and open up Google Slides. Each day, I will have them answer a few questions over what we covered in our lesson. They will answer the questions with the answer they believe to be correct, and then they will type out a sentence or so about something they learned today in class. They will make sure that the date is on the correct slide when they answer the question, and I will go back and check over their answers. This is a good way to check their progress while also having them learn how to use the computers and certain sites within the computer.
