

## Mini-Lesson: Human Impacts

1. **Grade Level:** 6<sup>th</sup>
2. **Curriculum Topic:** Human Impacts
3. **Tools:** Google Docs & PowerPoint
4. **Synopsis:** This lesson will introduce the students to all of the ways that humans impact the environment. I will use Google Docs to create a HyperDocument about all of the various human impacts, including: CO2 emissions, plastic pollution, elevated sea levels, etc. On this document, there will be links to readings, games, videos, and a short written response question, that the students will turn in on Google Classroom, all about human impacts. After reviewing all of the material on the HyperDoc, the students will choose one human impact on the environment to research. They will make a PowerPoint Presentation about that human impact, and present it to the class.
