

Grade: 1st

Curriculum: Math Problem solving

Tools: Bee-Bot, Wonder workshop Cue

Students will practice their problem solving skills by reading word problems for directions in building a course for their Bee-Bot and Cue to navigate through. Students will then give their Bee-Bot coding directions to navigate through the course they built based on their word problems. Students will also use Cue to navigate through the course they built. Then, once the students are comfortable with using Bee-Bot and Cue, they will work in partner pairs to build their own courses and make word problems for other students to solve.
