

App Evaluation Write Up

Name of App: Math Problems

Evaluators: Kennedy Capps & Baylee Nahlen

Criteria	Comments
Title	Math Problems
Version	Not listed
Publisher	Freely Blog
Audience	Elementary Students grades 1-3.
Type	This is a problem solving app. In the app students will have to solve math problems for their grade level.
Curriculum	This app is for math.
Environment(s):	This is great for in class and at home. In class you could use this for example problems to work through together. At home parents could help students work through math problems. This could also be a homework assignment.
Cost	Free.
Describe the app	The software has two tabs that you can click when you get on it. One tab is a multiplication table for students to look at and learn from. The other tab is all of the math problems. One problem will appear and then when you are ready you can click to see the solution. When you go to the solution it also has an explanation to help students understand how to get the answer. Then you can click the next button to keep new questions coming.
Our impressions of the app	We thought this app could really be beneficial. Sometimes it is hard for teachers to keep coming up with math problems so this could be helpful to

	<p>teachers. It is also a great way to integrate technology. You could have students get out paper and solve these math problems on their own. This app even has great images and explanations. We both see ourselves using this app in our future classroom.!</p>
Does the app pass?	Yes the software does pass!
