

Evaluation Write-up

Title: iMovie

Version: 2.2.8

Publisher: Apple

Target Audience: Ages 4+

Type of Software: Movie-making

Curriculum(s): STEM.

Possible Environment(s): Classroom, single use, small group

Cost: Free

Description of Software: This app allows people to make movies and trailers. For the trailers, you have 14 templates to choose from. You can customize logos, cast names, and credits. You can also record your trailer in the app. For movies, you can choose from 8 themes with transitions and music and pick from 10 different video filters. The app allows sound effects, songs from your own music library, and use your own narration.

Impression: This app is very user-friendly and can be useful to students when doing research projects, book reports, etc. While older students may use this app more than primary aged students, younger students could still use this app with the teacher's help. We like how easy it is to transfer from different apple devices and how easy it is to share via mail, messages, and AirDrop.

Does the software pass? Yes
