Kristen Hedge and Gabby Darnell

Evaluation Write-up

Title: Explain Everything

Version: 5.4.7

Publisher: Explain Everything sp. z o.o

Target Audience: Ages 4 and up, but I believe it would best used by the teachers or possibly even older students. I think the extent of the tools on there are too complex for young children.

Type of Software: It's a tool because it assists people in basic collaboration tasks

Curriculum(s): Could be used in or out of a classroom, but there is no particular curriculum that it fits in.

Cost: The app is technically free to download but is very limited. There is a $12.99 individual monthly plan, and an individual annual plan is $107.99.

Description of Software: This is an interactive whiteboard that allows for real-time and continuous collaboration through voice chat. It also has advanced recording features, and there are ways to do timeline editing.

Impression: We believe this could be a great software for teachers to use to collaborate with one another and to share files. We think this would be much too hard for young students (K-4) and would not personally use it in our classrooms.

Does the software pass? Yes
