

**Title:** Mimo

**Version:** 3.36.1

**Publisher:** Mimohello GmbH

**Target Audience:** Ages 4 and up, but would be best for older students.

**Type of Software:** Tutorial

**Curriculum(s):** Could be a fun extra game for the students to play to expand their knowledge in coding.

**Cost:** Free to download, but you must spend \$57.99 yearly, or \$8.99 monthly to access all of the beneficial tools.

**Description of Software:** Teaches programming language such as HTML, JavaScript, and Python. Allows you to create apps, games, and websites. It's also a very good way to learn coding in bite sized pieces during your daily routine.

**Impression:** We would not use this in my younger classrooms, but someone with older elementary students could use this to teach coding. We also believe that it is too costly to be used in the classroom because anything worth using in the app costs money.

**Does the software pass?** Yes
