

Educational Software Write-up

Title- BrainPOP

Version- 3.1.9

Publisher- BrainPOP

Target Audience- The app is aimed towards children ages 9-11 years old. However, I believe it could be used for students of younger ages who are more advanced or older for review.

Curriculum- This app has content on numerous subjects such as language and reading, math, science, social studies, arts, hobbies, fitness, etc. If you are covering a certain subject, like American history, then you could have students follow a module that is similar.

Cost- The app is free, however offers in-app purchase for subscription. For \$2.99 a month, there are four movies and quizzes that rotate daily. For \$6.99 a month, there is unlimited app access to 800+ movies and quizzes covering all content area.

Software Description- BrainPOP provides a lot of educational content covering various topics. Students can watch videos on certain topics and take quizzes to check their learning. There are also activities they can do for some subjects.

Software Impression- BrainPOP is a very visually appealing app with many things to look at and an easy navigation. This app would be great for individual or group use. As a teacher, you could project the video you want on the board and then take the quiz as a class together. It offers many things for a free app.

Does the app pass? Yes.
