

Educational Software Write-Up

Title—Mimo: Learn to Code

Version—3.20

Publisher—Mimohello GmbH

Target Audience—Ages 4+

Curriculum(s)—This is a very educational app. All of the content is appropriate for what the app says it will do and there is so much content within that the student will learn so much. The app also hits on Science and Literacy content.

Cost—There is a free version, but there is the option to upgrade to premium for \$9.99/month or \$29.99/year.

Description of Software—In this app, you get to choose between learning to code, building an iOS app, making a game, building an android app, and automating tasks. It walks you through some basic to challenging questions and then it gives you the right answer if you get it wrong. It also explains why you are right or wrong.

Impression of Software—We were very impressed by this software. The options for learning how to code are really neat and would be so appealing to a child. It teaches everything within itself so the student can be completely independent in using the app without being told what to do because it gives such good step by step instructions.

Does the app pass? Yes
