

Educational Software Write-Up

Title—Science Trivia

Version—1.0

Publisher—Ameer Moosa

Target Audience—Ages 4+

Curriculum(s)—This app would be perfect to use in any science class. It gives the option to go through trivia over general science, biology, chemistry, and physics. There are tons and tons of levels and multiple questions in each level so students can become experts on the subject that they're studying.

Cost—The app is free.

Description of Software—In this app, you can choose between the four categories stated above. You start at the first level and work through multiple questions. If you got a certain amount of questions wrong, it makes you redo the whole level, but if you got the majority right then you can move on to a bit of a more advanced level. It doesn't give you the right answer, but it will tell you if you're answer is wrong. Once you complete the level that you're on, it gives you a check mark and you are able to move to the next one.

Impression of Software—We were blown away by this software. It's insane all of the parts that it has to it and how the questions aren't just really simple, but they also aren't impossibly hard for no reason. This can help a struggling student or it can be helpful to students who are just remotely familiar with the topic. It would be a really good app to use if you were reviewing for an upcoming test. We were also really impressed with how it had the four different subject areas.

Does the app pass? Yes
