

- BrainPOP
- Online Version
- BrainPOP
- K-8<sup>th</sup> grade
- Curriculum: Any and all
- Good for practicing new concepts, for test review, advanced material for above average performing students, etc. There are several versions for different age groups and ELLs and material over almost every subject.
- Free
- Colorful, interactive site with games for drill and practice, along with online lessons and tutorials to introduce users to new material.
- Good first impression for us, the site was easy to navigate and didn't require any software updates to run smoothly. This could be an excellent tool to use for test reviews with your students, or for introducing them to new material if you want to incorporate interactive slideshows with lots of visual content to help students make more concrete connections.
- Pass, definitely.
