

- Fraction Calculator Plus #1
- Version 4.4
- DigitAlchemy LLC
- Rated 4+
- Mathematics (Operations using fractions)
- This app could easily be used in a math class, especially one for fifth or sixth grade where students are learning to do multiple operations with fractions. This could be used as a tool to check the students' work as they go, because it is so easy to make a small mistake at the beginning of a problem that trickles down through the rest of the operations.
- Free
- The app is not full of bells and whistles, the design is simple, looking like your standard office calculator. The app is extremely easy to use and keeps the problem displayed along with the answer so that the user can be sure that they are using it correctly.
- Our first impression of this app was that it was effective and easy to use. The possible uses of it range from the beginning of fraction operations in third or fourth grade to the multi-operational expressions taught in high school.
