

Padlet

Padlet can be used in many ways in a classroom.

1. It can be used to share lessons plans. When sharing these lesson plans, I can upload activities, websites and quizzes associated with these lesson plans.
2. Padlet can also be used in lieu of a teacher website. I could upload a picture of me, links to different websites I may use, documents and PDF files regarding AUP, Digital Citizenship, and advocacy.
3. Another way Padlet can be used is for students to upload their projects, class assignments, and school related documents so their parents can access them. This will help keep parents informed and connected to their student's progress in my classroom.

On-Line Tools

Regarding on-line tools, I have discovered there are infinite ways to incorporate and integrate technology in the classroom. These tools can enhance my lessons by adding interactive games and activities that are both educational and fun. They can also enhance my lessons by keeping the students attentive and intrigued. I like all the on-line tools I used and described. I like that they make education fun and effective at the same time. I will be using these in my own classroom in the future in hopes to help my students have fun while learning.
