Curriculum : **any math using: addition, subtraction, division, and multiplication**

Environments : **single user** because it keeps up with your score of rights and wrongs

Cost : **FREE**

Describe software : **When you first get into the app, it pops up a math problem starting with addition, then it sets a timer the more you get right the faster the timer and the more complex the problem is.**

Impressions of the software: **I like the app; I think it is fun for someone who needs to practice math! Only thing I did not like was there was no directions for kids to follow. I think this is a fun way to learn by making it a game but for a person who struggles with math and time pacing this is the app for you!**
