Title : **Space by Tinybop**

Version : **1.05**

Producer : **Tinybop Inc.**

Target Audience : **Ages 6-8**

Type(s) : **simulation** – it is a simulation because it let you explore everything about science

Curriculum : **space, atmosphere, gravity , weather, layers of planets etc**

Environments : **small group, lab setting, one computer classroom** : it is all of these because It is more of an exploring / research app so I can easily see it being in groups to find information, or a lab setting for exploring and answering questions or just for centers.

Cost : **2.99**

Describe the software : **this app allows you to step into outer space and explore all aspects, it gives information, watch videos, manipulate different parts of the app. This app allows you to feel like you are in space from the classroom or home. This app would be perfect for a lab classroom!**

Impressions of the software : **this app is AMAZING. It has so many features to allow students to explore space like they are actually there and they can manipulate things in the app. It has activities and quizzes for them to study for future practice in understanding. I think this app would definitely be on my list for my own classroom**
