

Evaluators: Kaitlin Ponder, Danielle Hunkins, Miranda Wyatt

Title: Khan Academy - iPad

Version (if there is one or if it is one of a series): 7.1.0

Publisher or Producer: Khan Academy

Target Audience (if your opinion differ from the publisher, state that):
Kindergarten – Adult.

Type(s) of software with your justification: Tutorial and drill and practice because the app offers lessons and videos to teach users new content, but it also offers drill and practice opportunities through the quizzes and questions that are asked.

Curriculum(s) - How does it (or can it) fit into the curriculum -Possible environment(s) and Why: This app could fit into any curriculum well because it offers all subjects. The app could be used in the classroom with lessons, but it could also be used as a reward for younger students during free time. It could be used as a reward because it is a fun and more exciting alternative to worksheets.

Cost: Free.

Write a paragraph or two describing the software: When you first log into the app, you are prompted to select a grade level and courses. You are then taken to the homepage where you can find your current lessons and courses. When you select a course, you are given a course summary along with the lesson and sublessons. After selecting a lesson, you are shown your rewards and points. Inside the sublessons, are the actual lessons themselves, documents, videos, and quizzes that go along with that lesson.

Write a paragraph or two on your impressions of the software and possibly how you see the software being used in your class: We really liked this software because it was easy to use, fun, and organized. We felt that students would like to use the app and would also benefit educationally from it. We could see this app being used as a reward due to the fact that it is fun but is also information rich. Another idea we had was to use it for homework or as a Checkpoint in a certain class for students to complete at home.

Does the software pass: Yes.
