

Padlet

There are many ways that you can incorporate Padlet into your curriculum. It could be used to introduce new topic and the students can explore boards that you have created. Students can use it for projects. Instead of creating a poster board, they could create a Padlet and present that instead. Notes and resources can be shared between just group members and not the entire class while they are collaborating. Padlets can make learning students lead and fun due to the fun images and gifs that you can put on them. I also think you could outline your Units with Padlet by putting all of your worksheets, lesson plans, and videos in one spot and accessing them easily. This would keep the classroom and learning very organized.

Integrating Technology Padlet

Online Tools

I have learned a lot about online tools. Before this project I really wasn't sure what they were. Now I have learned that they are different software's or even websites that help you perform a certain task. For example, Google Docs would be considered a tool. I will be using different tools in my classroom very often. They make the classroom technology integrated while still keeping it fun and educational. The only thing that I would say that I dislike about them is that not all tools that are out there are very good to use, and some cost money. You must be careful when choosing a tool to ensure that there are no hidden fees and that it will perform all the tasks you would like for it to.
