

Clips Synopsis

This short how-to video will explain two things. First, it will show a cheap way too create a booklet without having to buy a normal notebook. All you need is common household materials. Second, it shows how I would like for my students to set up their reading logs. This video could not only be helpful for my future students but for teachers as well. The booklet is a great and quick tool to use. It can be used for notetaking or projects. I decided to devote my video to my content area of English. I will have my students record what books they are checking out and reading. The reading log will record the time it takes for them to read a book, as well as what their favorite genre seems to be. I think that using the Clips app would be very helpful in my classroom. I like that you can add fun stickers and it is very simple to learn how to use. The only thing I do not like is that you must hold down the record button. This would make it hard to record yourself.
