

## Clips and Virtual Lab

### Mini-Lesson Idea #2

Kristen Stokes

#### 1. Grade level/Audience:

The grade level for this project would be 2<sup>nd</sup> grade. Students will use a Virtual Lab as well as the Clips app to perform an experiment and document what they learned.

#### 2. Curriculum topic:

This project is a Science based lesson and will cover the water cycle.

#### 3. Tools:

Students will be split into groups and will use the Science Lab for Kids app to perform a video on the water cycle. On this app, there are already videos for students to watch and follow along with. The students will then use the Clips app as a group to create a video about what they learned from their experiments to present to the class.

#### 4. Synopsis of what you are doing and how you will be using the tools:

I will begin by reviewing with students what we have learned previously about parts of a water cycle. The students will then be split into groups and given the video they will need to watch and follow along to in order to perform an experiment on one of the areas of the water cycle. I will also be sure to go over with students how to use the Clips app and tell them that they will be making a video of themselves explaining what they learned in their experiments. The students will get to present their videos to the class.
