

Mini Lesson - Kahoot and Keynote

Teacher: Miss Kori Tapp

Grade Level: Third

Subject: Science

Curriculum Topic: States of Matter

Tools: Kahoot and Keynote

Synopsis: The students have already had a week studying and learning the different states of matter. In this class period, we will be reviewing by playing Kahoot. I will have rewards for the top three students at the end of the game. After the Kahoot review game, I will assess their comprehension of the past week's lessons by having them create a keynote page. On the page, they will need to define matter, solid, liquid, gas. They will need to have pictures of different examples for each state of matter. The poster should be organized, neat, and informative. This is a great way for them to show their understanding, review and reflect on all the previous lessons.
