

Padlet

There are so many ways to use Padlet in my future classroom. One way I could use Padlet would be to brainstorm as a class on an idea. I could start a board, invite all my students to join it and they could add anything they wanted. This is a great way to get all students involved and engage students in discussion over any given topic. Another way I could use Padlet would be to start a live question bank. This would allow students to post any questions they have as I go through a lesson or if they just need a better explanation. I could use Padlet as an exit slip for the day. I could ask them three things they learned today, explain today's lesson to me, what they liked most about the lesson, etc. I could start a current events board where I post today's news, the week's news, birthdays, events for the week, etc. Another way I could use Padlet would be to start a book wish list board where students could post all the books they would like to read. Other students could see books they may like and didn't know about, it would encourage students to look for new books they would like to read, etc. There are endless possibilities with Padlet.

On-Line Tools

I have discovered many ways to enhance my lessons and many ways to improve my future students learning. Through computers, smartboards, iPads, or even phones, there are thousands of different ways technology can improve children's learning. Through Padlet, iMovie, PowerPoint, Excel, educational websites, etcetera all of my lessons will be enhanced. I like that technology makes it easy for users to share files, collaborate instantaneously and save to multiple drives. The only thing that I dislike about technology is that in some ways the students don't get the hands on experience with materials. By this I mean, writing down material, cutting, coloring, making projects with their hands. I am a hands on learner, it took me a very long time to adjust to learning through technology.
