

The app we evaluated was Encyclopedia Britannica version 2.0 by Encyclopaedia Britannica Inc. They said it was appropriate for ages 4+ and we thought it could be used throughout school, just changed the environment. This app was a discovery learning and tools app because the user could input anything they would like to know about, but could also use it as a research tool to help them write a video or create a project. This would fit into almost any curriculum as a resource because it encompasses everything you could think of. For younger grades, this would be a teacher tool or a small group environment, but as students got older they could use it as a single user or in a lab setting. The app itself was free, but said it required in-app purchases. Through our exploration, we never found where these purchases were or where they were required to proceed, however.

Encyclopedia Britannica is an interactive, colorful encyclopedia on your mobile device! Simply search whatever you would like to know more about using their basic search bar and you immediately have a picture and countless facts about the object at your fingertips. You can also select a letter and scroll through things that fall into that category. Finding these things and learning about them can open a whole new world.

This app was colorful, informative, and well put together. Not only did we think that any age could use this app, but we wanted to use it ourselves! The pictures were perfect and colorful. The facts were simple but informative. Overall, this app was one of the better ones that we reviewed during this assignment. All three of us plan to offer this in our classrooms as a tool and resource for our students.

This app passes 100%!!
