

Title: Happy Little Farmer

Version: 2.6

Publisher: GiggleUp Kids Apps And Educational Games Pty Ltd

Target Audience: The publisher says 4+ and we agree.

Curriculum: This would be used with the science curriculum.

Possible Environments and why: We think this app could be used at home or in the classroom. This game could be used at home because it is fun and easy for the kids to use alone. In the classroom it could be used because it keeps the kids interest. You earn badges for each accomplishment and I think they would want to keep going to earn them all.

Cost: This app is free.

Describe the software: When you open the app you first have to clean your garden, get rid of all the rocks, sticks and leaves. Next you get your garden ready by using the rake then you plant the seeds. You have to shew the bugs away so they don't eat the plant and you can't forget to water them too. Then when they are ready you pick them.

Impression on the software & how it would be used in class: We liked the software, we thought it was really cute and easy to use. We thought that this app could be used in science when we were talking about parts of a plant, the plant cycle or anything like that.

Pass or fail: Pass
